

Shores Neighbors:

Please be advised that we are starting an algaecide treatment on the pressurized irrigation system today to try and address some of the organic material build up/plugging you may have noticed in your filters. We have been advised by the pond maintenance company that this chemical is not harmful to humans, pets or any of your grass, shrubbery or trees. We anticipate treating for 4 straight days in an attempt to get some of this chemical in each and every irrigation line and lateral on the system, so please keep irrigating on your normal schedule.

If you are having really bad filter plugging problems and would like a solution, please contact Lou Schnierer and he can provide you with plans on how to set up your filter system so that it is self-cleaning and has eliminated all the filter plugging problems he experienced in the past.

Thanks for your cooperation.

Yours truly,
The Shores Board of Directors
